**Job-related spatial mobility is a subject of great importance in Europe. But how mobile are the Europeans? What are the consequences of professional mobility for quality of life, family life and social relationships? For the first time these questions are analysed on the basis of the data of a large-scale European survey.**

The contributions in Volume I are directed at the diversity and the extent of mobility in six European countries (Germany, Spain, France, Poland, Switzerland, Belgium).

In Volume II (2009) the causes and determinants of job mobility and their individual and societal consequences are analysed in cross-national comparison.
